DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claim 8 is rejected under 35 U.S.C. 102(b) as being anticipated by LaConti et al. (U.S. Pat. No. 4,820,386) (hereinafter “LaConti”).

Regarding claim 8, LaConti teaches a gas sensor comprising: a sensor body comprising: a membrane electrode assembly comprising an electrolyte membrane (proton-conducting membrane 20); a sensing electrode 24; a counter or reference electrode 22; a water reservoir (e.g., chamber 14 containing water) positioned at one side of the sensor body; a cap (unlabeled) comprising gas flow chamber 40 having two openings capable of introducing a fluid towards the membrane electrode assembly from an opposite side of the membrane electrode assembly to the water reservoir; and a thin plate (e.g., porous metal disk 32) between the cap and the membrane electrode assembly, wherein the plate 32 comprises pores or holes connected to the openings of the cap and having a smaller diameter than that of the openings of the cap (see, e.g., col. 3, line 9 –col. 4, line 14; figures 1 and 5).

2. Claim 8 is rejected under 35 U.S.C. 102(e) as being anticipated by Inoue et al. (U.S. Pat. Appl. No. 2004/0134780 A1) (hereinafter "Inoue").

Regarding claim 8, Inoue teaches a gas sensor comprising: a sensor body comprising: a membrane electrode assembly 6 comprising an electrolyte membrane (proton conductive membrane 8); a sensing electrode 10; a counter electrode 11; a water reservoir (e.g., metal can

Applicant's arguments with respect to the present claim have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,
